

# Amazon - Job Description

## Role: Software Development Engineer I (SDE-1)

Job ID: AMZ-IN-98231

Location: Hyderabad / Bangalore, India

Department: Amazon Retail Platforms & Core Backend Services

## About the Team & Role

Amazon is seeking innovative, passionate, and detail-oriented Software Development Engineers (SDE-1) to build planet-scale e-commerce architectures. As an SDE-1, you will collaborate with Senior SDEs and Product Managers to build highly available backend microservices handling millions of transactions per day.

## Key Responsibilities:

- Design, develop, test, deploy, and maintain customer-facing web services and backend APIs.
- Write clean, robust, maintainable, and well-tested code following Object-Oriented principles.
- Participate in code reviews, architectural discussions, and automated deployment pipelines.
- Identify and resolve performance bottlenecks, system reliability issues, and scale constraints.
- Support operational excellence and production systems with monitoring and metrics.

# Amazon SDE-1 - Qualifications (Page 2)

## Basic Qualifications

To be considered for this position, candidates must meet the following baseline requirements:

- Bachelor's degree in Computer Science, Computer Engineering, or related STEM field.
- 0 to 2 years of relevant professional experience or demonstrable software projects.
- Strong proficiency in at least one modern programming language: **C++**, **Python**, or **Java**.
- Solid foundation in computer science fundamentals: **Data Structures**, **Algorithms**, and complexity analysis.
- Strong understanding of Object-Oriented Programming (OOP) and software design patterns.
- Sound understanding of basic database querying and relational data modeling with **SQL**.
- Excellent problem-solving skills and capability to write clean, unit-tested code in technical interviews.

## Interview Process & Topics

Candidates will go through online coding assessments followed by virtual rounds focusing on:

1. Data Structures & Algorithms (Trees, Graphs, Dynamic Programming, Arrays, HashMaps).
2. Low-Level Object Oriented Design (LLD) and clean code architecture.
3. Amazon Leadership Principles (Customer Obsession, Ownership, Bias for Action, Dive Deep).

# Amazon SDE-1 - Preferred Skills & Benefits (Page 3)

## Preferred Qualifications

Candidates possessing any of the following additional skills will be prioritized:

- Practical experience with cloud computing platforms, particularly **Amazon Web Services (AWS)** (EC2, S3, Lambda, SQS).
- Experience with containerization technologies such as **Docker** and orchestration with Kubernetes.
- Experience working with relational databases such as **PostgreSQL or MySQL**.
- Familiarity with NoSQL distributed data stores such as **DynamoDB, Redis, or MongoDB**.
- Knowledge of asynchronous event-driven messaging systems like Apache Kafka or RabbitMQ.
- Familiarity with CI/CD deployment pipelines and automated integration testing tools.

## Compensation & Benefits

- Expected Salary Package: **16.0 LPA to 28.0 LPA** (inclusive of base salary, joining bonus, and Restricted Stock Units - RSUs).
- Comprehensive health insurance, wellness coverage, and employee assistance programs.
- Hybrid working model with modern development workstations and ongoing technical training credits.
